

## REMINERALIZATION GEL

The remineralization gel is used after the bleaching process has been completed .

-Rinse out your trays before applying a very small bead in the front and back of the trays.

-Let set in your mouth for 4-5 minutes.

-Remove trays and do not rinse mouth.

-wash and rinse mouth trays thoroughly.

-do not rinse your mouth for 3 to 5 hours

It is recommended you remineralize just before going to bed for a thorough nighttime remineralization process. Remineralize once a week during bleaching process and once a week thereafter for a healthy smile.
